

## Environmental Policy

SANDRA S.p.A. dedicates the maximum attention, in addition to safety and quality aspects, to the environmental aspects related to its activity and to the supply chain of its products. We aim to achieve sustainable development and harmony between ecology and business activities, to contribute to the welfare of all through the prevention of pollution and, where possible, the use of sustainable resources

SANDRA S.p.A. is first of all committed to ensuring compliance with the applicable standards (mandatory and voluntary) and to guaranteeing the continuous improvement of its environmental performance, which is an essential condition for "sustainable development". To this end, specific environmental programs are established and maintained for the reduction of environmental impacts and the optimal use of resources, related to the most significant aspects such as, for example, the management of water, energy, waste, raw materials.

The program aims to achieve innovative results, making environmental protection a top priority. SANDRA S.p.A. pursues this goal through the development of products and production processes that minimize the impact on the environment and contribute to its preservation on a global scale.

In particular, the commitments undertaken by SANDRA S.p.A. from an environmental point of view concern the following aspects:

1. Adopt a context analysis approach to identify relevant internal and external stakeholders and factors.
2. Make a useful contribution to society through the development of technologies and products oriented to the conservation of resources and the environment.
3. Adopt production methods oriented to the reduction of environmental impacts with particular attention to the reduction of the consumption of energy resources, raw materials, hazardous substances, reduction of industrial waste production.
4. Identify, monitor and control significant environmental aspects and manage identified risks and opportunities;
5. Implement all possible forms of environmental risk reduction through monitoring and control systems, adequate event response organization, thorough training of personnel.
6. The use at the strategic level, where possible, of a product and process life cycle perspective;
7. Working in synergy with local authorities and national and international partners to define common environmental strategies.
8. Promote awareness of environmental conservation among SANDRA S.p.A. employees through training, awareness and involvement activities.

The environmental commitment of SANDRA S.p.A. involves not only all the employees working in our plants, but also the contractors who, with their work, contribute to the realization of the product and to the management of the facilities.

All personnel, contractors and other interested parties are called upon to actively collaborate, to the extent of their competence, in the improvement of the Environmental Management System. The commitment we intend to maintain concerns everyone:

### PRODUCING PACKAGING WITH RESPECT FOR THE ENVIRONMENT
